

FOOD PROCESSING

The Gold Series® cartridge dust and fume collector combines enhanced performance with ease of service while cleaning the work environment of irritating dust and fumes.

GS10 on Cereal Ingredients

Companies in the food processing industry take raw agricultural products (such as grains) and turn them into the food products that we eat everyday (like bread and cereal). Dust collection applications can include dried food ingredients from coarse grains to fine spices and additives. For sugars and other sticky dusts, we fit the Gold Series® (GS) with spun-bond Dura-pleat™ cartridges, which have high release efficiency. The GS is perfect for high efficiency filtration where recovery of the product is not required.

Safety Considerations

A clean food processing facility is vital for worker and visitor safety. Slips and falls are a constant concern for anyone running a food processing business. Keeping fugitive dust contained minimizes slippery floors. Some food ingredients are allergens, another serious concern for those who are affected. Airborne allergen particles could cause serious illness and even death if ingested continuously or at high levels. Flours, corn starch and other starches can be explosive. In these applications, each Gold Series® is expertly fitted with explosion vents to meet NFPA requirements. Farr APC has numerous Gold Series® on these applications.

Key benefits:

- High filtration efficiency
- Excellent energy performance
- Long element life

Gold Cone™ Cartridge

Camfil Farr **HemiPleat®** cartridges have an expanded capacity due to the patented inner Gold Cone™. This inner cone increases media area and provides uniform dispersion of back-pulsed air. It also opens up more useable space for air flow in the filter.

Food Processing Application Focus Users

C&F Foods
Unilever Best Foods
Pro Pet
Baldwin Richardson Foods
Cereal Ingredients, Inc.
H. Mueller-Thym

Wm. Wrigley, Jr. Company
Maruchan, Inc.
Powder Systems, LLC
Ontario Foods
International Food Solutions
Newlyweds Foods
